Safeguarding children is a significant national problem with an estimated 570,800 children in England being referred to Social Care in 2014. It is important therefore that busy GPs get fast access to relevant information such as the latest guidance, local and national sources of help, as well as key contacts numbers, in order to support decision-making. The App is an easy to navigate tile based system, which is continually updated with the newest information in order to allow medical staff to make fast and effective decisions, even where no internet connection is available.
